

THE INDISPENSABLE PALLET DISPENSER.

QComp's Automated Pallet Dispenser is a plug and play module that provides a space-saving area for stacked pallets to be staged in front of downstream processes. QComp Technologies designed this unit to provide a robust and reliable dispense method. Easy to maintain, the dispenser accommodates the "less than perfect" pallets. Even if your pallets have twisted blocks, the QComp Automated Pallet Dispenser will square them up for you. This unit uses no drag chains or tabs or fingers, which can damage pallets during normal operation.

QComp Automated Pallet Dispenser Advantages

- Compliant clamping plate for imperfect pallets.
- Consistently aligns the pallets for downstream automation.
- Plug and play installation.
- Capable of dispensing or in reverse stacking empty pallets.
- No tabs, fingers, rockers, etc., that could damage the pallet.
- Saves floor space by eliminating the maze of conveyors.
- Seamless integration to QComp palletizers.
- Handles pallets, trays, bins, totes, etc.

Automated Pallet Dispenser Features

- Integrated scissor lift and feed conveyor.
- Wide chain protects your pallets.
- Dispense rate of 4-6 pallets per minute.
- 230V or 480V power option.
- Rockwell Micrologix controller.
- Panelview Plus 400 (HMI).
